1. Introduction

The Restaurant Management System is a web-based solution for restaurant ordering and orders management where staff can update and view all order history. also it allows users/customers to make orders by signing in/signing up then view their order status.

This manual covers the following:

- How to deploy and access the system
- Main features for users
- A walkthrough of using the system with screenshots

2. Technical Requirements

2.1 Minimum System Requirements:

Component	Requirement
Processor	1.5 GHz or higher
RAM	4 GB minimum
Storage	500 MB free space minimum
OS	Windows 10/11, macOS 10.14+, or Linux

2.2 Software Dependencies

- **Python 3.8+** with pip package manager.
- **Microsoft SQL Server 2019+** (Express Edition works fine).
- **Web Browser** (Chrome 90+, Firefox 88+, Edge 90+).

2.3 Network Requirements:

- Internet connection for initial setup
- Port 5000 available for Flask server
- Port 1433 for SQL Server (default)
- Windows Authentication or SQL Server Authentication configured

3. Installation & deployment

1. Download all the system files

- Download and extract all project files to a directory: C:\RestaurantSystem\

2. Database creation:

- Open Microsoft SQL Server Management Studio (SSMS)
- Run the SQL script provided in Implementation/database/ Restaurant_db.sql
- Creates database and tables
- Insert sample data (staff, menu items, test users)

3. Install ODBC Driver for python to connect to SQL Server

- Download and install **ODBC Driver 17 for SQL Server** from Microsoft
- Enable Windows Authentication in SQL Server Configuration Manager

4. Configure backend connection

- Install Python dependencies: write pip install -r requirements.txt

5. Run the project:

- Ensure SQL Server services are running
- Open command prompt in project folder
- Start the application by writing in the terminal: python app.py
- Open the browser at: <http://localhost:5000>.

4. Main Features

4.1 For Customers:

1. User Registration & Authentication

- Password encryption and session management
- Updating profile and address storage

2. Online Ordering System

- Interactive menu with different categories
- cart updates
- Secure checkout process
- Viewing order status

- Order history tracking

4.2 For Restaurant Staff:

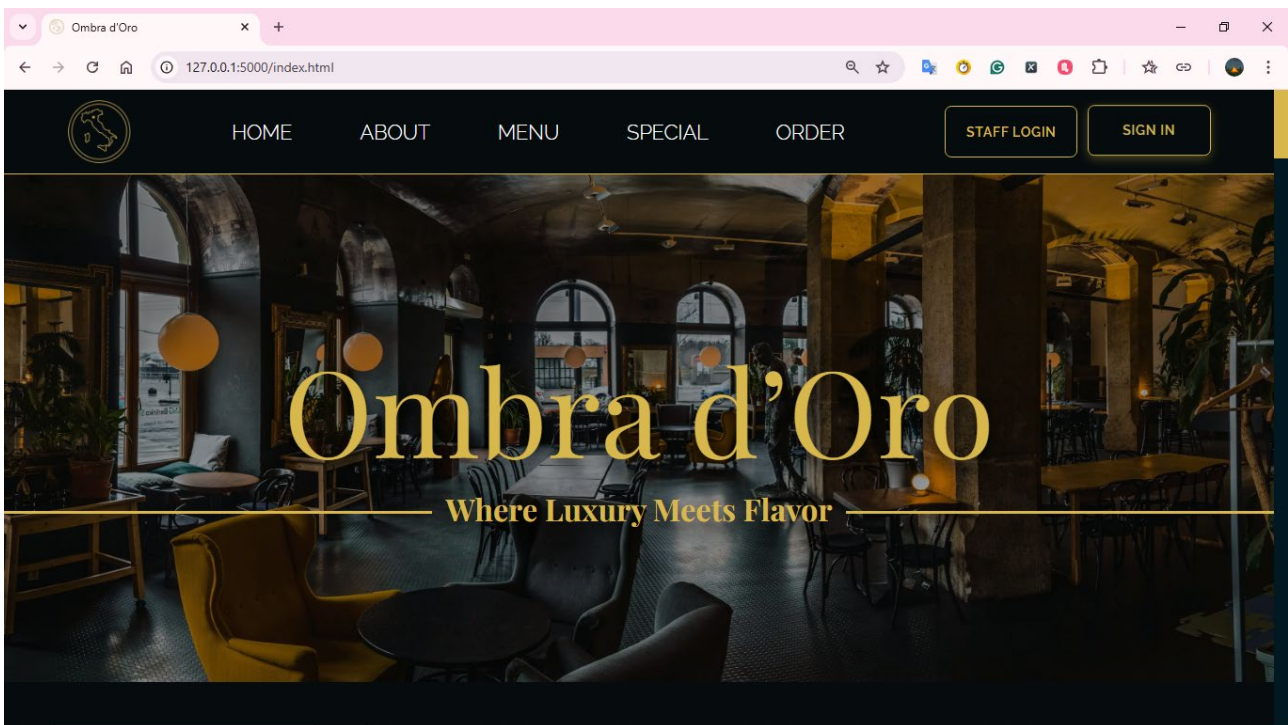

1. Order Management Dashboard

- View pending/preparing/delivered orders
- Update order status in real-time
- View analytics and statistics for business insights

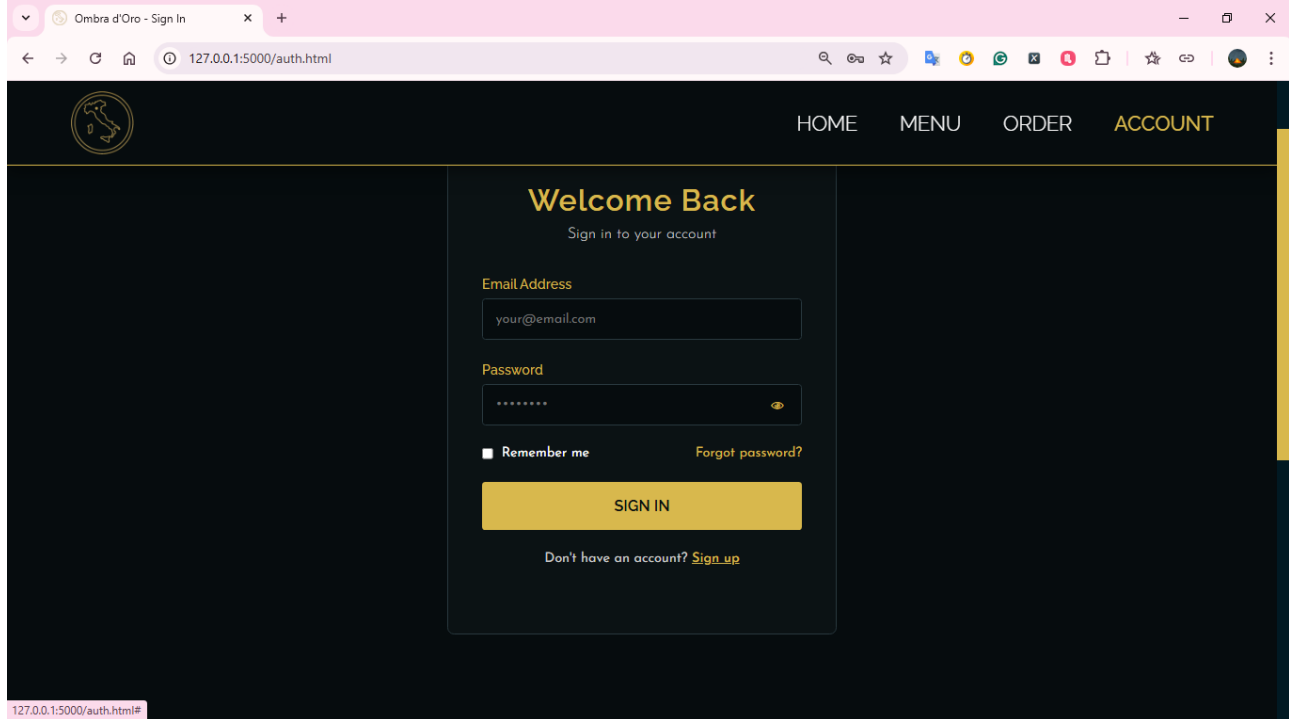

5. User Walkthrough with Screenshots

5.1 Scenario: Customer placing an online order

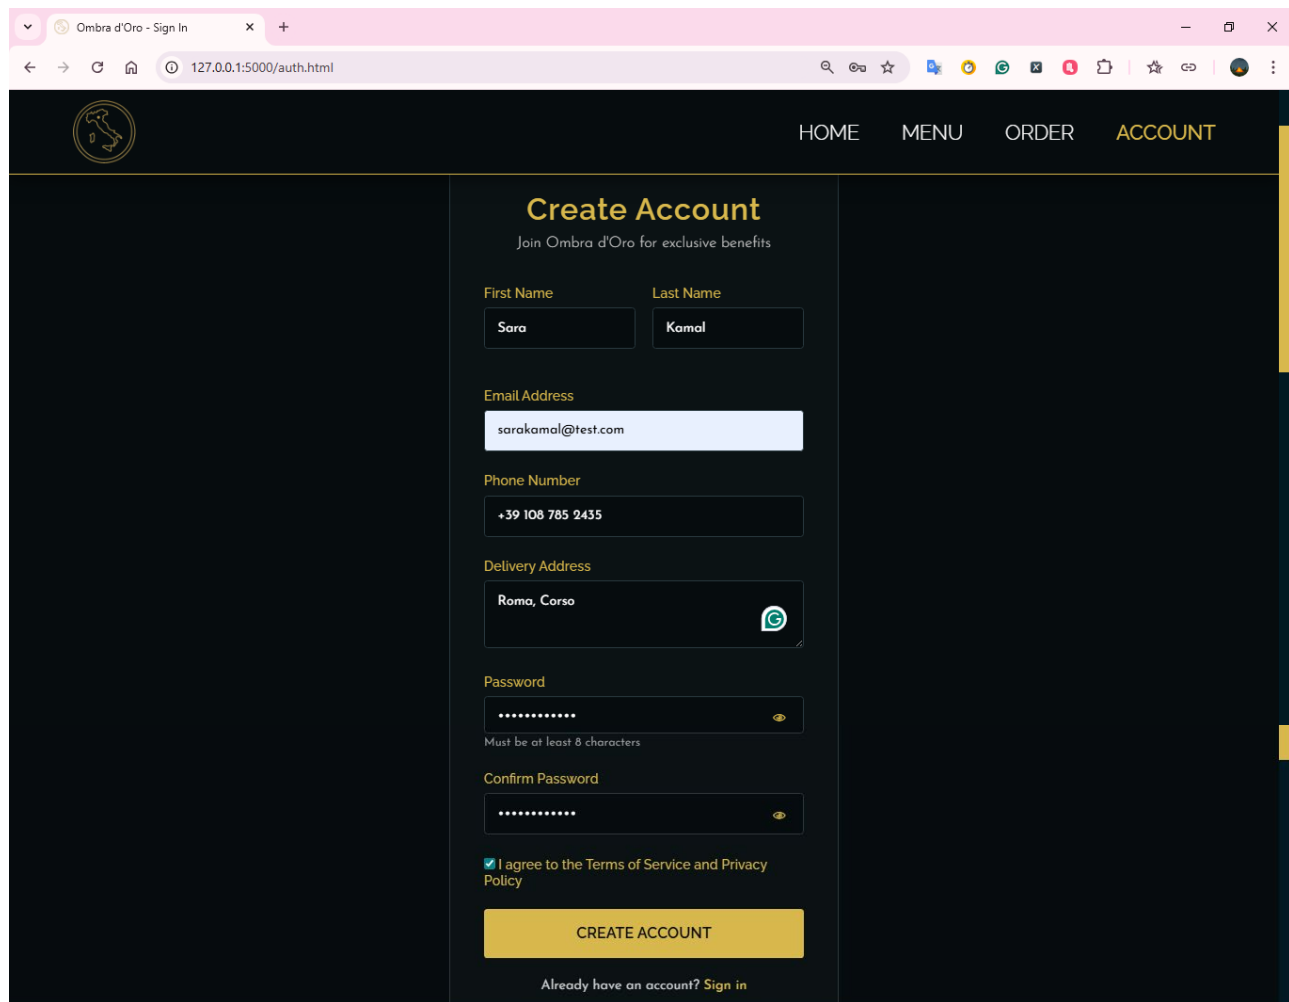

STEP1: Homepage access
